NUMMA

rCARI VALIDATION STUDY

WEEKLY REPORT

SUMMARY OF THE RESULTS:

METHOD	EFFECTIVE	NOT EFECTIVE	TOTAL	% COMPLETED
REMOTE	391	350	741	65%
FACE-TO-FACE	461	287	748	77%

*This table only considers valid results (no duplicates) downloaded from the MoDa platform until July 3.

REMOTE DATA COLLECTION

Briefly, we explain our methodology for remote collection:
Each enumerator has a list of homes which have to be contacted in three different ways:

- Regular call
- WhatsApp text
- WhatsApp call

This order changes throughout the day, depending on the village (for example, if we notice a community has more WhatsApp coverage than normal call) and the time frame preferred for the call.

- The calls are made from 7:30am until 7:30pm in order to increase the availability of the respondents.
- The enumerators register the result of every call in a printed database used for their internal control (call again, voicemail, restricted, out of service, number of attempts, etc.)
- The databases rotate among the enumerators to try to maximize the effective calls. This is a mechanism used to try to adapt to the preferences of the households, depending if they prefer a different interview method, contact form, or gender of the interviewer.
- At least two calls per day for each home are made, in the communities that apply according to the schedule, and depending on the number of registers for every community. One of these calls is made during the time frame specified by the person listed. This process is repeated for the 3-4 days destinated to each community. **It is important to take into account that these minimum number of calls can be higher since the enumerators generally try a normal call and then a WhatsApp call.
- In order to increase the effective responses, we sent a WhatsApp text to the different homes, introducing ourselves, explaining the context of the study and trying to scheduling the call. In addition, the face-to-face team helped the remote by trying to alert the homes that we were going to call them.
- For every call made, the enumerator was instructed to register every call. Nevertheless, due to their own methodology in trying to be more effective and agile, an important number of calls are not being registered. Therefore, we use our internal platform to monitor the number of calls made. **Below we detail the real number of calls registered.
- Once the respondent agrees for the interview, the enumerator starts recording the call and, when it is finished, the results are immediately sent to the platform MoDa.
- At the end of the day, the enumerators are instructed to register their results in our platform: number of calls and indicate whether the call was successful or not.

Using our internal control of number of calls (through our platform), we send an updated summary of the number of calls for effective and not effective registers:

		NUMBER OF REGISTERS	NUMBER OF CALLS
EFFECTIVE		391	1505
NOT EFECTIVE	Agreed to be interviewed but later	4	21
	Didn't pick up / no answer	97	1413
	Refused to be interviewed	61	217
	Other	188	1304
	Total	350	2955
TOTAL		**741**	**4460**

We have made 4.460 calls in total, 1.505 calls for the effective and 2.955 calls for the not effective registers.

The following table shows a summary of the number of effective and not effective registers categorized in the number of calls done:

NUMBER OF CALLS	EFFECTIVE	NOT EFFECTIVE				
		Agreed to be interviewed but later	Didn't pick up / no answer	Refused to be interviewed	Other	TOTAL
1	95	1		17	20	38
2	87			13	17	30
3	41			4	15	19
4	40	1		3	23	27
5	32			7	16	23
6	40	1		10	22	33
7	12				6	6
8	10	1		4	15	20
9	10			2	18	20
10	7		9	1	10	20
11	3		10		4	14
12	6		10		6	16
13	5		11		9	20
14			13			13
15	3		2			2
16			14		3	17
17			6		3	9
18			7		1	8
19			7			7
20			8			8
Total	**391**	**4**	**97**	**61**	**186**	**350**

In this table, we can see that most of the effective registers were completed in the first 3 calls. For the homes that we have not yet received an answer yet, the registers with number of calls from 1 – 5 are focused on communities where there was no phone service at all or for homes with incorrect contact information. It is important to consider that,

even though we faced a database with low responsiveness (no signal for normal call or WhatsApp, problems with face-to-face collection), we kept on calling in order to maximize the number of effective results.

Below, the same analysis but with number of calls:

NUMBER OF CALLS	EFFECTIVE	NOT EFFECTIVE				
		Agreed to be interviewed but later	Didn't pick up / no answer	Refused to be interviewed	Other	TOTAL
1	101			12		12
2	162	2		36		38
3	120			15	72	87
4	108			24	84	108
5	215	5		25	145	175
6	258	6		48	210	264
7	63				112	112
8	72	8		48	64	120
9	108			9	162	171
10	90		70		60	130
11	88		154		143	297
12	36		168		96	264
13	39		91		13	104
14			84			84
15	45		165		75	240
16			128		32	160
17			85		17	102
18			216			216
19			152		19	171
20			100			100
Total	1505	**4**	**97**	**61**	**188**	2955

Additionally, we show below the number of calls for every community and a short explanation of the methodology used and the complications faced during the collection:

REGION	PROVINCE	VILLAGE	NUMBER OF CALLS	EFFECTIVE REGISTERS	NOT EFFECTIVE REGISTERS	COMMENTS
AMAZONIA	**ARAJUNO**	ARAJUNO	206	45	5	Community with the highest effectiveness.
	LORETO	LORETO	310	28	33	Some parts of Loreto do not have cellular coverage. Also, the community was untrusting to give out information because of previous robberies and extorsions that happened in the community.
		PUERTO MURIALDO	223	13	15	Several calls sent to voicemail; we kept on trying.
		SAN JOSE DE DAHUANO	181	16	10	Political Lieutenant did not allow the face-to-face team to continue with the data collection process and asked for a permit from the provincial

						delegation. This complicated the collection for remote, but we kept on trying.
		SAN JOSÉ DE PAYAMINO	149	1	15	There is not enough cellular signal coverage with any operator. Households give their contacts for emergencies only.
		SAN VICENTE HUATICOCHA	250	11	17	There is bad signal coverage in some sectors confirmed by face-to-face team.
COSTA	**SALITRE**	EL SALITRE	168	19	11	Users had restricted numbers or calls went directly to voicemail. Face-to-face team helped schedule calls to increase effective registers.
		GENERAL VERNAZA	258	26	21	Households kept changing the time of the scheduled calls and did not answer. Face-to-face team helped schedule calls to increase effective registers.
		JUNQUILLAL	204	22	12	Face-to-face team helped schedule calls to increase effective registers.
	SANTA ELENA	COLONCHE	146	12	20	The Political Lieutenant gave out instructions to the community indicating that they should not provide any information, even by phone. The team was able to complete some registers prior to the inconvenient.
		MANGLARALTO	251	21	17	Low responsiveness from homes. Face-to-face team helped schedule calls to increase effective registers.
		SIMÓN BOLIVAR	207	16	23	Strong resistance to cooperate, homes hung up the phone, asked to change the date and time of the call.
SIERRA	**COTACACHI**	APUELA	213	26	10	In certain parts of the community, there is not enough cellular coverage.
		IMANTAG	232	34	13	Face-to-face team helped schedule calls to increase effective registers.
		PEÑAHERRERA	140	14	13	The community only has signal coverage from CNT, which made it difficult to contact the households.
		QUIROGA	397	15	34	Strong resistance to cooperate, homes avoided answering the interview or repeatedly changed the date and time of the call. Face-to-face team helped schedule calls to increase effective registers.
		SEIS DE JULIO DE CUELLAJE	172	21	19	The community only has signal coverage from CNT, which made it difficult to contact the households.
	GUAMOTE	CEBADAS	180	20	12	Strong resistance to cooperate, homes avoided answering the interview or repeatedly changed the date and time of the call. Face-to-face team helped schedule calls to increase effective registers.
		GUAMOTE	323	6	33	People from the community go to Riobamba from Wednesday to Sunday to work, making it difficult to contact the homes. On Monday and Tuesday, responsiveness was low.
		PALMIRA	250	25	17	Face-to-face team helped schedule calls to increase effective registers.
TOTAL			**4460**	**391**	**350**	

The list of homes for remote has been fully exhausted, and, even though the team continues calling to complete the registers, the responsiveness expected at this point is low.

FACE TO FACE DATA COLLECTION

The following table shows the results for face-to-face collection.

	NUMBER OF REGISTERS
EFFECTIVE	461
NOT EFFECTIVE	45
NOT REGISTERED	242
Total	748

The homes not registered in the MoDa platform are homes already visited or that were tried to reach. For the majority of these homes, it was not possible to contact the users because they were either working, not at home or refused to answer the interviews. In other cases, community authorities did not allow us to continue or the distrust of the people hindered the advance to more homes.

Below, a brief explanation of the additional complications we had during the collection for each community:

VILLAGE	NOT REGISTERED	NOT EFFECTIVE	TOTAL	COMMENTS
GUAMOTE	39		39	Distrust. Additionally, most of the respondents where not at home since they go to fairs in Riobamba for most days of the week. For the second phase, we propose to collect data in the Columbe community, located in Colta.
QUIROGA	36		36	Due to local celebrations, respondents refused to answer the interview and were also difficult to contact.
LORETO	24		24	Authorities asked for a permit from the provincial delegation, delaying the data collection and generating distrust in some households.
SEIS DE JULIO DE CUELLAJE	24		24	
APUELA	21		21	
IMANTAG	17		17	Authorities asked for a permit from the provincial delegation, delaying the data collection and generating distrust in some households.
MANGLARALTO	2	14	16	
GENERAL VERNAZA	10	5	15	
PEÑARRERA	13		13	
PALMIRA	11		11	
PUERTO MURIALDO	10		10	
SIMÓN BOLIVAR	1	9	10	
ARAJUNO	8		8	
EL SALITRE	1	7	8	
SAN JOSE DE DAHUANO	8		8	Political Lieutenant blocked the data collection process.
JUNQUILLAL	2	5	7	
CEBADAS	6		6	Distrust, households refused to answer the interview.
COLONCHE		5	5	The Political Lieutenant blocked the data collection process, generating distrust and lack of willingness among the households.

SAN JOSÉ DE PAYAMINO	5		5	
SAN VICENTE HUATICOCHA	4		4	
Total	**242**	**45**	**287**
